                                                                                                                                                                                                                                                                                                                                                                              Constructed at the Institute for Genomic Research (TIGR),
Rockville, MD. Genomic DNA isolated from a cloned population of
Trypanosoma brucei (TREU927/4 GUTAL 10.1) was mechanically sheared
to give a tight size distribution (
4 kb). The v + i method used for the library construction is
described in detail in Smith, H. and Veneer, J.C. (Making small
insert libraries for whole genome shotgun sequencing projects. In
Genome Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barrell, Oxford University Press, 1999).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 521, 7

GENERAL INFORMATION:
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: McSwiggen, James
APPLICANT: Beigelman, Leonid
TITLE OF INVENTION: RNA Interference Mediated Inhibition of Telomerase Gene
TITLE OF INVENTION: Expression Using Short Interfering RNA (SINA)
FILE REFERENCE: 02-708-A (400/080)
CURRENT FILING DATE: 2003-04-28

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description

Sequences shown in AAV41169 to AAV41181 represent antisense

oligonucleotides to the RNA component of human telomerase (hTR). These
antisense oligonucleotides specifically hybridise to a nucleotide
sequence within an accessible region of the hTR, but that does not
hybridise to a sequence within the template region of hTR. These
component of human telomerase in a sample. This is useful for diagnosing
cancer (especially neuroblastoma, bladder, colon and prostate cancer),
and providing prognosis for a cancer patient. The inhibitory
cancer (especially neuroblastoma, bladder, colon and prostate cancer),
and providing prognosis for a cancer patient. The inhibitory
cancer (especially neuroblastoma, a cancer patient, The inhibitory
coligonucleotides can inhibit the telomerase activity level in a cell by
interfering with transcription of the RNA component, decreasing the
half-life of the telomerase RNA component transcript, inhibiting the
coll the kNA component into the telomerase holoenzyme, or inhibiting the
coll used for inhibiting telomerase activity in both cultured cells and in
cells in vivo. They can be used in therapeutics for treating or
cells in vivo. They can be used in therapeutics for treating or
cells in vivo. They can be used in therapeutics for treating or
immunosuppression, and for selectively down-regulating specific branches
cof the immune system, e.g. a specific subset of T-cells, in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               of the immune system, e.g. a specific subset of T-cells, in anti-inflammatory therapies or for treating infections by, e.g. yeast,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAZ08704
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                              conjugations to the RNA component of human telemerase (hTR). These antisense oligonucleotides specifically hybridise to a nucleotide sequence within an accessible region of the HTR, but that does not sequence within an accessible region of the RTR, but that does not oligonucleotides may specifically be used for detection of an RNA component of human telemerase in a sample. This is useful for diagnosing component of human telemerase in a sample. This is useful for diagnosing component of human telemerase and sample. The inhibitory of an providing prognosis for a cancer patient. The inhibitory of interfering with transcription of the RNA component, decreasing the half-life of the telemerase activity involubiting assembly of the RNA component into the telemerase activity, inhibiting the component into the telemerase activity in both cultured cells and in the the RNA component into the telemerase activity in both cultured cells and in the understand the component of the telemerase activity in both cultured cells and in the understand contraception or sterilisation, for preventing cancer, for contraception or sterilisation, for the immune system, e.g. a specific subset of T-calls, into interference of the immune system, e.g. a specific subset of T-calls, into interference of the immune system, e.g. a specific subset of T-calls, into interference of the immune of the the immune of the telemerase of the telemerase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RNA component; human telomerase; antisense oligonuclectide; infection; neuroblastoma; bladder cancer; colon cancer; prostate cancer; cancer; contraception; sterilisation; immunosuppression; therapeutic; hTR; immune system down-regulation; anti-inflammatory therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         inflammatory therapies or for treating infections by, e.g. yeast, sites or fungi.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                             New polynucleotide(s) anti:sense to human telomerase - used for detecting or inhibiting human telomerase, e.g. for treating cancers, contraception, immuno-suppression or treating infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ..

A method has been developed for detecting telomerase activity in a non-cellular portion of body fluid from a cancer patient using a non-cellular portion of body fluid from a cancer patient using a modified telomeric repeat amplification protocol (TRAP). A method for detecting cancer comprises: (a) removing the cellular portion of a body fluid remainder; (c) assaying the extract for the presence and quantity of telomerase RNA or telomerase activity; and (d) comparing the telomerase RNA or telomerase activity; and (d) comparing the methods are used in cancer diagnosis and prognosis; and also to monitor cancer therapy effectiveness. Unlike prior art telomerase activity assays in cancer patients, the method allows noninvasive sample collection. The methods which detect circulating tumour markers. The present than other methods which detect circulating tumour markers. The present content of the content and telomerase RNA template PCR primer used in
                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence, a nested PCR primer for the RNA component of human telomerase (RCHT), was used in a 5' RACE procedure. The RCHT can be used in the recombinant prodn. of an active telomerase mol., capable of adding sequences to chromosomal DNA telomeres, and in the synthesis of mutant sequences for the detection of mutant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         recombinant production; synthesis; mutant; detection; mammalian; identification; modulating agent; neoplastic condition; transcriptional regulatory sequence; gene therapy; disease;

The present sequence is a PCR primer for a RNA component of human telemase (RCHT), antiennse plasmid. RCHT was derived from a genomic DNA library obtd. from the human lung fibroblast cell line WI-38. The RCHT can be used in the recombinant prodn. of an active telomerase mol., capable of adding sequences to chromosomal DNA telomerase, and in the synthesis of mutant sequences for the detection of mutant mammalian telomerase RNA component polynucleotides. The RCHT may also be used in the identification of telomerase modulating agents, and in the detection of telomerase modulating agents, and in the detection of telomerase related, or neoplastic conditions in a patient. Polynucleotides of at least 25 consecutive nucleotides identical, or recomplementary to the RCHT sequence linked to heterologous transcriptional regulatory sequences, can be used for the gene therapy of human diseases.
                                                                                                                                                                                                                           Gaps
                 also be used in the identification of telomerase modulating agents, and in the detection of telomerase related, or neoplastic conditions in a patient. Polynucleotides of at least 25 sequence inclostides identical, or complementary to the RCHT sequence linked to heterologous transcriptional regulatory sequences, can be used for the gene therapy of human diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RNA component; human; telomerase; lung fibroblast; cell line WI-38;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RNA component of human telomerase antisense plasmid PCR primer R3C.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The RNA components of (non) human mammalian telomerase(s) especially from mouse, rat and chinese hamster are all claimed. Antisense oligonucleotides can be used to block the activity of the telomerase; probes and primers can be used in detection; vectors and host cells transformed with the isolated telomerase genes can be used for production of telomerases; RNA and DNA ribozymes and triplex forming oligonucleotides directed against the telomerase genes can be used therapeutically as can plasmist. A mouse which lacks the telomerase gene (also claimed) can be used for study of telomere regulation in vivo, and the role it plays in immortalisation. Three primers (AATII1040, AATII1041) were then used to produce antisense oligonucleotides which were then used to produce antisense expression plasmids. AATII1040 was used alongside both AATII1043 and
                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RNA components of (non)human mammalian telomerase(s) - useful in studying cell senescence and immortalisation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Telomerase; mammal; antisense; triplex forming oligonucleotide; plasmid; probe; primer; ribozyme; ss.
                                                                                                                      ö

The present sequence represents PCR 3'-primer R3C used for amplifying the human telomerase (hTR). The RNA and DNA can be used in hybridisation assays to detect or quantify telomerase activity in cells, tissue or fluid samples, e.g. for diagnosis of eukaryotic parasites (yeast and protozoa) or tumours. It is also useful as primers for amplification assays. The truncated or recombinant vertebrate telomerase is used therapeutically to increase telomerase activity (also as reagents in the screening assay) while the RNA or other inhibitors such as antisense molecules, are used to reduce such activity. Typical applications are initiation/restoration of activity to cause senescence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         directed against e.g. Trypanosoma should cause fewer side effects than drugs currently used to treat such infections. The DNA encodes those parts of hTR RNA essential for activity but are significantly shorter than the endogenous RNA component.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     or to prevent immortalisation of cells in tumours or parasites. The DNA is also used to produce recombinant telomerase, which can then be used conventionally to raise antibodies for diagnostic detection of telomerase. Detecting telomerase allows early diagnosis of tumour or infection, before clinical signs manifest. Telomerase inhibitors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA encoding essential RNA components of human telomerase - also truncated or recombinant telomerase, useful for diagnosis and treatment of cancer and infection by eukaryotic parasites
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .

                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                            Human TPC2, TPC3 and TR genes - regulate telomere length or modulate
                                                                                                                                                                                                                                                                    Primers R3c and F3b (see AAV1948B) were designed for the PCR amplification of the human telomerase hTR gene (see AAV19481). hTR mRNA levels were showed to correlate with telomerase activity levels in a variety or mortal and immortal cell lines. Methods of the invention allow derection and quantitation of TPC2 (see AAV19479), TPC3 (see AAV19480) and/or TPC2 gene products and can be used to detect immortal cells, especially telomerase positive

The present sequence represents a PCR primer from the present invention which describes human telomerase reverse transcriptase (HTRT). The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polynucleotide, on administration of the compound; (B) preparation of recombinant telomerase Dy contacting a protein preparation of hTRT with a telomerase RNA component; (C) detection of the hTRT RNA or protein in a sample by binding a relevant protein preparation of hTRT with a telomerase RNA component; (C) detection, amplifying the product and correlating the presence of complex or amplifying the product with presence of hTRT in the sample; and (B) increasing the product with presence of hTRT in the sample; and (B) increasing the proliferation of a vertebrate cell by increasing coll vertebrate cell proliferation to create a medicament that inhibits ageing. A protein preparation of hTRT and the polynucleotide encoding hTRT can be used in the mannifacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be used in the mannifacture of medicaments for inhibiting the methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

This sequence represents a PCR primer for DNA encoding the human TPC3 protein, which is contained within the recombinant mammalian host cell of the invention. The invention provides methods and reagents for regulating telomeral elength and modulating telomerase activity in mammalian cells as well as for detecting, diagnosing, and treating related diseases and conditions such as cancer, pregnancy, or fertility in humans and other
telomerase activity (cf. WO 9735871). This sequence represents a primer used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DNA encoding proteins TPC2 and TPC3 - useful for regulating telomere length or modulating telomerase activity
                                                                                                                                                                                                                                                                                                                                                                                                       TPC2, TPC3, human; telomere length regulation; cancer; pregnancy; fertility; diagnosis; therapy; PCR primer; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel method for diagnosing bladder cancer waich comprises detecting telomerase RNA in a urine sample. The method of the invention has greater sensitivity and reliability than assays for
                                                                                                                                                                                                                                                                                                                                         The present sequence is a PCR primer specific to human telomerase RNA (hTR). It is used to amplify human staufen (hStau) cDNA synthesised using random hexamer primers and Superscript II reverse transcriptase.
                                                                                                                                                                                                                                       Human staufen polypeptide useful in methods for identifying telomerase inhibitors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The present invention describes a method (I) for detecting telomerase activity in a sample. The method comprises treating the sample with a solid phase to bind telomerase, separating the solid phase from the sample to form a test sample which may be treated to elute bound telomerase and assaying the sample for telomerase activity. Also described are: (I) a kit (II) for detecting telomerase activity, and (2) a component (III) of an assay system for telomerase activity; and (2) a component (III) of an assay system for detecting telomerase activity, comprising a solid phase for binding telomerase activity, comprising a solid phase for binding (I) is useful for cancer diagnosis or prognosis and detection of micrometastasis as detection of telomerase activity is indicative of cancer or micrometastasis. The solid phase used in (I) is useful for separating telomerase from a sample and therefore for detecting telomerase from a sample and therefore for detecting telomerase from a sample and therefore for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            telomerase activity. (11) is userui in constitution for cancer, may also comprises means for assaying an mRNA diagnostic for cancer, may also comprises (RT) PCR primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Detecting telomerase activity in samples, useful for diagnosis of cancer and micrometastasis, comprises treating sample with solid phase, removing solid phase and treating to elute bound telomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present sequence represents a reverse transcriptase (RT) PCR prime. human telomerase RNA, which is used in an example from the present
                                                                                                                                          Human; telomerase; hTR; reverse transcriptase; RT-PCR; PCR primer; detection; cancer; micrometastasis; diagnosis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         100.0%; Score 15; DB 21; Length 26; 100.0%; Pred. The invention relates to detecting human telomerase RNA template (hTR)

Example 1; Page 14; 30pp; English.

```
The invention relates to detecting inman relomerase kna template (INTR) in a invention relates to detecting inman relomerase reverse transcriptase protein RNA (hTDRT) RNA (In a bodily fluid, comprising amplifying RNA extracted from plasma or serum sample, or its corresponding CNA comprising fluid, which is useful for grantitatively amplified produce of (1) or CNA product. The method is useful for detecting (1) in a bodily fluid, which is useful for useful for detecting (1) in a bodily fluid, which is useful for detecting (1) in a bodily fluid, which is useful for detecting (1) in a bodily fluid, which is useful for detecting (1) in a bodily fluid, which is useful for detecting (1) in a bodily fluid, which is useful for carcinomy preferably a corrier, bladder, include a malignancy preferably a corrier, producted a malignancy or carcinoma in-situ, preferably cervical correct and increptibelial neoplasia, bronchial dysplasia, asyrpical apprepaisa of the breast, ductal carcinoma in-situ, caypical adenoma, atypical endometrial hyperplasia, or Barrett's colorectal adenoma of the breast, ductal carcinoma in-situ. The method is also useful for treating a human for the therapy after detection of (1), for determining a carcinoma in situ. The method is also useful for treating a therapy administered to a human (1) provides and for monitoring a therapy administered to a human (1) provides and for monitoring a therapy administered to a human (1) provides a lowed for fluitheit welly, of (1) in plasma or serum of humans during or following surgical procedures to remove premalignant or malignant or malignant allows the development and completed therapy as an each of the cape or treatment failure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to methods and reagents for regulating telomere length and for modulating telomerase activity in mammalian cells. The invention also relates to purified, synthetic or recombinant peptides such as TPC2 or TPC3 used for detecting regulators of telomere length and telomerase activity in mammalian cells and for a variety of related diagnostic and therapeutic purposes. The method is useful for screening, diagnosing, monitoring and treating diseases and other conditions such as cancer, pregnancy, fertility, telomere length and telomerase-activity. The present sequence is a reverse transcription (RT) PCR primer used for amplifying human telomerase (hTR) cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptide products of the human TPC2 and TPC3 gene are involved in regulation of telomere length and activity are useful to diagnose and treat telomere length and activity-related diseases -

FOCT-USO3-04088-539/c

SEQUENCE 539, Application PC/TUSO304088

GENERAL INFORMATION:

APPLICANT: Ribozyme Pharmaccuticals, Inc.

APPLICANT: Beigelman, Leonie Beigelman, Leonie Beigelman, Leonie Using Short Interfering RNA (sinA)

TITLE OF INVERTION: RNA Interference Mediated Inhibition of Telomerase Gene

TITLE OF INVERTION: Expression Using Short Interfering RNA (sinA)

TITLE OF INVERTION: Expression Using Short Interfering RNA (sinA)

FILE REFERENCE: 20-709-A (4000/800)
